

Software Engineer — Analytics Platform SDK & API

June 19, 2026

Alteryx's platform sits at the intersection of analytics, AI, and developer tooling — exactly where I want to build. The SDK and REST API suite that powers 8,000+ enterprise customers demands the same reliability and API design rigor I have been shipping in production.

Why I am a strong fit:

- **Python API and SDK depth.** CortexQ is a Kubernetes-native LLM inference platform built on FastAPI: multi-provider router, KEDA autoscaler (scale-to-zero to N replicas), Kopf CRD operator, circuit breaker with EWMA load balancing. 88 pytest integration tests, deployed via Helm + ArgoCD, load tested to 500 VUs. API design and test coverage at production quality.
- **Node.js and distributed stream processing (bonus qualifications).** AlgoPulse handles 2,000 req/sec with Kafka event streaming and Redis pub/sub for live leaderboard updates, load tested to 10K concurrent users. Capgemini: built Kafka + Spark + Hadoop pipelines reducing ticket-processing latency by 20% at peak load.
- **AI-driven development at enterprise scale.** Isomer AI: shipped 10+ production features across a per-tenant insurance carrier platform powered by Claude, GPT-4o, and Gemini — Temporal.io durable orchestration, MCP server tooling, 923 commits, 7 deployments. Mphasis: 5+ AI workflows improving document processing accuracy by 25% across 10K+ daily medical claims.
- **Code quality and CI/CD ownership.** GCP Cloud Run deployments at NC State, ArgoCD + GitHub Actions CI at Isomer, AWS + GCP at Mphasis. Testcontainers integration test suites across CortexQ and PulseRank. Contributed 110+ RSpec tests to Expertiza (5,000+ users), increasing coverage by 25%.

Alteryx is rebuilding its SDK and API layer for the AI era — I want to be part of that foundation.
