Hiring Team
Hightouch
Remote

Dear Hightouch Team,

Hightouch is building what every data team actually needs: agents that can take a question about user behavior or campaign performance and answer it directly from the data, without a five-step analytics workflow. I've spent the past year building exactly this kind of system — production LLM pipelines and agentic orchestration that sit between raw data and the people who need answers. I'm applying for the Software Engineer, AI Agents role.

Here's the direct overlap:

- **Production agentic systems, shipped to enterprise clients.** At Isomer AI, I built and deployed Temporal.io agentic workflows with MCP tooling into live enterprise environments — multi-step orchestration across Claude, GPT-4o, and Gemini, handling auth, tool-calling, and state management under SLA. AlgoPulse extends this: a TypeScript event-driven agentic platform using Temporal.io and Kafka, scaled to 2,000 concurrent requests with zero state loss. I build agents that run in production, not just demos.
- **Semantic retrieval and data pipelines.** VectorLift is a semantic search system combining BM25, a fine-tuned bi-encoder with in-batch negatives, and a cross-encoder re-ranker, evaluated across 6 pipeline configurations with NDCG@10 and MRR@10. The indexing pipeline uses Kafka for event-based corpus ingestion into Elasticsearch and Qdrant, served via FastAPI. This is the retrieval and data processing layer that Hightouch's data agents need under the hood.
- **Rapid prototyping into production.** I've won or placed Top 10 in 6+ national hackathons, shipping full-stack MVPs in 48-hour sprints. At Isomer, I took AI features from prototype to enterprise-grade production across 923 commits and 7 deployments. The ability to move fast from POC to production is how I work by default.
- **Backend architecture and full-stack ownership.** I owned the complete backend stack at Isomer — PostgreSQL, Redis, Auth0, Docker, Terraform, CI/CD — under on-call SLA for enterprise clients. I can architect and own the systems behind an AI agent, not just the prompt layer.

I'd welcome the chance to talk through the agent building systems interview and show how my experience applies to Hightouch's roadmap.

Sincerely,

Aditya Kulkarni
