To the Engineering Team at LiveFlow,

Finance teams at most companies are still stuck in spreadsheets, running month-end close processes that take days and require a team. LiveFlow's bet that agentic AI can compress that to hours—with accuracy and auditability the CFO can stake their name on—is the kind of product challenge I want to work on from day one, not as a junior ticket-taker but as someone shipping features that reach thousands of finance teams.

- **Agentic AI in Production, Not Just in Projects:** At **Isomer AI**, I shipped 10+ production AI features into enterprise insurance workflows—multi-model LLM pipelines (Claude, GPT-4o, Gemini), Temporal.io agentic workflows with MCP tooling, Auth0 RBAC—across 923 commits and 7 deployments. I owned incidents, managed CI/CD, and held SLA commitments to enterprise clients. I understand what it means to build agents that can't be wrong.
- **TypeScript Full-Stack with Next.js:** **PulseRank** is a TypeScript + NestJS + Next.js event-driven platform: MySQL transactional writes with idempotency-key deduplication, MongoDB feed projections with TTL indexes, Redis sorted sets for sub-millisecond leaderboard reads—validated for multi-store consistency under 10K concurrent users with Testcontainers. My **AlgoPulse** project—also TypeScript + Temporal.io + Kafka—scaled an agentic orchestration platform to 2,000 async inference requests/second after I identified and eliminated the API-polling bottleneck.
- **AWS and Infrastructure:** At **Mphasis**, I automated AWS and GCP CI/CD deployments and ran Grafana production monitoring. At Isomer I owned Terraform, Docker, and Sentry APM. The infrastructure side of this role isn't new to me.
- **Product Mindset, Not Just Engineering:** I've built products used by real customers, tracked errors in production, resolved on-call incidents, and iterated on reviewer feedback (my first Expertiza PR was rejected for over-engineering—I learned and shipped the right version). I care about the user outcome, not just the technical elegance.

LiveFlow's founding team is ex-Revolut—engineers who shipped at speed and learned to care deeply about financial correctness at scale. That's exactly the culture I want to grow in. I'm excited about the Loom video step in your process—happy to show how I think, not just what I've built. Looking forward to the conversation.

Sincerely,

Aditya Kulkarni
