To the Phia Engineering Team,

Phia is building what I think of as the trust layer between AI and commerce—a shopping agent that already has 1.5 million users and has earned the confidence of 9,600+ brands. That combination of consumer scale, AI infrastructure, and fast shipping culture is exactly the environment I want to grow in as a full-stack engineer. My background in TypeScript, React, Node.js, and production AI systems maps directly to the work Phia is hiring for.

- **Full-Stack Product Engineering:** At **Isomer AI**, I owned the entire full-stack codebase—React frontend, Node.js/TypeScript backend, PostgreSQL + Redis data layer—and shipped 10+ production AI features in collaboration with product and design teams. 923 commits and 7 production deployments in under a year. This is the high-ownership, end-to-end shipping culture Phia describes.
- **TypeScript + API + Multi-DB Systems:** I built **PulseRank** in TypeScript with NestJS and Next.js—MySQL transactional writes, MongoDB feed projections with TTL indexes, Redis sorted sets for sub-millisecond reads, live SSE streams—validated for consistency under 10K concurrent users with Testcontainers and benchmarked with k6. Content, product, and analytics data flows are exactly what I built.
- **AI Product Development:** At Isomer AI, I integrated multi-model LLM pipelines (Claude, GPT-4o, Gemini) and Temporal.io agentic workflows into a production product serving real enterprise customers. Phia's AI shopping agent operates at the same intersection of language models, user intent, and product data—I understand how to ship AI features that work reliably at scale.
- **Startup Velocity:** I thrive in lean, fast-moving teams. At Isomer AI, I was a core contributor on a small team shipping to production weekly. I bring the ownership mindset and cross-functional collaboration skills Phia needs to keep shipping at pace.

Phia is reinventing how people discover and buy. I want to build the systems that make that happen. I would be glad to talk through how my experience fits the team.

Sincerely,

Aditya Kulkarni
