June 11, 2026

To the Salesforce Enterprise Security IAM Team,

Identity and Access Management is the trust layer that every Salesforce product depends on. The work of building foundational IAM services—device trust, access enforcement, PKI, and the systems that protect customer data at enterprise scale—is precisely the kind of engineering I want to grow into. I bring production experience in distributed systems, cloud-native infrastructure, Auth0 RBAC, and an AI-first engineering approach that aligns directly with Salesforce’s Agentforce-driven development philosophy.

- **AI-First Engineering:** At **Isomer AI**, I built and shipped 10+ production AI features using multi-model LLM pipelines (Claude, GPT-4o, Gemini), Temporal.io agentic workflows, and Auth0 RBAC access control—923 commits, 7 production deployments. I use Claude Code and AI tools as a core part of my daily engineering workflow, which maps directly to Salesforce’s requirement for a “demonstrated, genuine AI-first approach.”
- **Distributed Systems and Kubernetes Infrastructure:** I built **CortexQ**, a Kubernetes-native LLM inference platform with KEDA autoscaling (scale-to-zero to N replicas), a Kopf CRD operator, circuit breaker logic, EWMA load balancing, and full OpenTelemetry + Prometheus + Grafana observability—deployed via Helm + ArgoCD GitOps and load tested to 500 concurrent users with 88 pytest integration tests.
- **Identity and Access Control:** My production work at Isomer AI included implementing Auth0 RBAC—role-based access control governing user permissions across enterprise client environments. While I am early in my IAM journey, I bring strong engineering fundamentals and genuine curiosity about Zero Trust, TLS, OAuth, and certificate-based trust mechanisms.
- **Operational Excellence and Security Awareness:** At **Mphasis**, I automated AWS and GCP CI/CD pipelines and led model red-teaming sessions to identify failure modes. At **NC State**, I published IEEE research on Computer Vision-based Cybersecurity Threat Detection—evidence of my academic grounding in security domains.

I am excited by the intersection of distributed systems, AI agents, and enterprise security that defines the IAM platform team at Salesforce. I would welcome the chance to discuss how my background fits the MTS role.

Sincerely,

Aditya Kulkarni
