Hiring Team
Stripe
South San Francisco, CA

Dear Stripe Team,

The Dashboard Foundation team is building the platform that every Stripe user relies on to understand and operate their business. Getting that right — the APIs, the data modeling, the cross-platform UI, the performance at scale — is the kind of foundational, high-stakes engineering I find most compelling. I'm applying for the Full-Stack Engineer role on that team.

Here's why I'm a strong fit:

- **Python backend engineering, tested in production.** CortexQ is a Python FastAPI microservice with EWMA load balancing across Claude, GPT-4o, and Gemini backends, Redis request queuing, Kubernetes autoscaling via KEDA, and 88 pytest tests. At Mphasis, I built Python-based OCR + NLP + ML workflows that improved document processing accuracy by 25% at enterprise scale. Python is my primary backend language.
- **Backend API design and large-scale codebase ownership.** At Isomer AI, I owned the full backend stack — PostgreSQL, Redis, Auth0 RBAC, Docker, Terraform — across 923 commits and 7 production deployments. I've designed REST APIs for enterprise clients, managed CI/CD pipelines, and resolved production incidents on-call. This is the level of ownership Stripe's Dashboard Foundation needs.
- **Cross-platform UI, including React Native.** AlgoPulse ships a React Native mobile client with real-time AI inference alongside a TypeScript web backend, handling 2,000 concurrent requests with zero state loss. I've built dashboards and data-intensive UIs across web and mobile — the kind of cross-platform surface area Dashboard Foundation operates on.
- **Data analysis and observability at scale.** My NC State research involved feature extraction and model training on 500GB+ genomic datasets. CortexQ and PulseRank both include OpenTelemetry + Prometheus + Grafana observability stacks. I understand how to build systems where data quality and pipeline health are visible and actionable.

I'd be glad to talk about how my background maps to Dashboard Foundation's roadmap.

Sincerely,
Aditya Kulkarni
