To the Airwallex AI Engineering Team,

Financial operations are still largely manual for startups: payments routed by hand, payroll reconciled in spreadsheets, bookkeeping done after the fact. The problem is not a data problem or a model problem — it is an orchestration problem. Airwallex has the financial infrastructure to fix it. The AI team's job is to build the reasoning layer on top. That is the problem I want to work on.

- **Agentic Systems in Production:** I built **AlgoPulse** — a full agentic AI orchestration platform on Temporal.io and Kafka, sustaining 2,000 async inference requests per second with sub-200ms SSE delivery. I identified an API-polling failure mode under load and rebuilt the delivery layer using event-driven streaming. Multi-step reasoning pipelines that work reliably at scale require exactly this kind of iteration.
- **Multi-Model LLM Pipelines, Shipped:** At **Isomer AI**, I built production LLM features across Claude, GPT-4o, and Gemini — tool-calling, RAG integrations, Temporal.io workflow orchestration — across 923 commits and 7 production deployments. This is the stack Airwallex is using: LangChain, agentic frameworks, multi-provider model selection based on task fit.
- **Evaluation and Monitoring Rigor:** I built an LLM evaluation harness from scratch — 2,000 frozen test examples, hallucination rate tracking, p50/p95 latency, cost-per-call, McNemar significance tests across 6 metrics. Production AI that “improves with usage” requires knowing exactly how it is failing before you can make it better.
- **Fintech RAG Context:** **GlanceAI** was a compliance-ready RAG system I built for fintech and healthcare environments: per-tenant vector isolation, deterministic output architecture for regulated data. Airwallex's AI operates in exactly this kind of environment — high-stakes, auditable, no hallucinations allowed.

Airwallex is solving the right problem at the right moment with infrastructure no one else has. I want to build the AI layer that makes it automatic. I would be glad to discuss.

Sincerely,

Aditya Kulkarni
